/note="Organ: Pancreas; Vector: pSPORTI; Site_1: Not 1; Site_2: Sal 1; Starting library constructed using SuperScript Plasmid Library kit (Life Technologies). CDNA made by oligo-dT prinning. Size-selected by column fractionation; average insert size 1.08 kb. Library was amplified once on solid support and plasmid DNA from library was prepared. The library DNA was normalized by method #4 from Bonaldo, Lennon, and Soares 1996 Genome Research 6:791-806: 0.5 microgram single-stranded library plasmid DNA was mixed with 5 micrograms Product representing library inserts and hybridized to an Ecot of 20. Single-stranded (unhybridized) plasmids were isolated by hydroxyapatite chromatography and used to make this

SuperScript Plasmid Library kit (Life Technologies). CDNA made by Oilgo-dT priming. Size-selected by Column fractionation; average insert size i.08 kb. Library was amplified once on solid support and plasmid DNA from library was prepared. The library DNA was normalized by method #4 from Bonaldo, Lennon, and Soares 1996 Genome Research 6:791-806; 0.5 microgram single-stranded library plasmid DNA was mixed with 5 micrograms PCR product representing library inserts and hybridized to an Eoct of 20. Single-stranded (lumbridized) by hydroxyapatite chromatography and used to make this

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ð
Site_2: Sal 1; Starting library constructed using SuperScript Plasmid Library kit (Life Technologies). CDNA made by oligo-dr priming. Size-selected by Column fractionation; average insert size 1.08 kb. Library was prepared once on solid support and plasmid DNA from library was prepared. The library DNA was normalized by method #4 from Bonaldo, Lennon, and Soares 1996 Genome Research 6:791-806; 0.5 microgram single-stranded library plasmid DNA was mixed with 5 micrograms PCR product representing library inserts and hybridized to an Ecot of 20. Single-stranded (unhybridized) plasmids were isolated by hydroxyapatite chromatography and used to make this

The library DNA was normalized by method #4 from Bonaldo, Lennon, and Soares 1996 Genome Research 6:791-806; 0.5 microgram single-stranded library plasmid DNA was mixed with 5 micrograms PCR product representing library inserts and hybridized to an Ecot of 20. Single-stranded (unhybridized) plasmids were isolated by hydroxyapatite chromatography and used to make this

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 2431.75

Sequence 2431.75

Patent No. US20020142981A1

GENERAL INFORMATION:

APPLICANT: Horne, Darci T.

APPLICANT: Vockley, Joseph G.

APPLICANT: Gene Logic, Inc.

TITLE OF INVENTION: Gene Expression Profiles in Liver Cancer FILE REFERENCE: 44921-508-W0

CURRENT APPLICATION NUMBER: US/09/880,107

CURRENT FILING DATE: 2001-06-14

PRIOR FILING DATE: 2000-06-14

PRIOR SPELICATION NUMBER: US 60/237,054

PRIOR APPLICATION NUMBER: US 60/237,054

SPRIOR SELING DATE: 2000-06-14

SPRIOR SELING DATE: 2000-10-02

NUMBER OF SEQ. ID NOS: 3950

SOFTWARE: Patentin Ver. 2.1

                                                       Proc. Natl. Acad. Sci. U.S.A. 94:9384-9388(1997).

Proc. Natl. Acad. Sci. U.S.A. 94:9384-9388(1997).

-!- FUNCTION: SbcCD cleaves DNA hairpin structures. These structures can inhibit DNA replication and are intermediates in certain DNA recombination reactions. The complex acts as a 3'->5' double strand exonuclease that can open hairpins. It also has a 5' single-strand endonuclease activity (By similarity).
-!- SUBUNIT: Heterodiane of sbcC and sbcD (By similarity).
-!- SIMILARITY: BELONGS TO THE SMC FAMILY. SBCC SUBFAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

Liu D., Paviopoulos E., Modi W., Moschonas N., Mavrothalassitis G.J.;
"ERF: genomic organization, chromosomal localization and promoter
analysis of the human and mouse genes.";
Oncogene 14:1445-1451(1997).
-I- FUNCTION: POTENT TRANSCRIPTIONAL REPRESSOR THAT BINDS TO THE HI
ELEMENT OF THE ETS2 PROMOTER. MAY REGULATE OTHER GENES INVOLVED
IN CELLULAR LOCATION: Nuclear.
-I- SUBCELLULAR LOCATION: Nuclear.
-I- PTM: PHOSPHORYLATED BY MULTIPLE KINASES INCLUDING PROBABLY ERKZ.
PHOSPHORYLATED REGISTER THE ACTIVITY OF ERF (BY SIMILARITY).
-I- SIMILARITY: BELONGS TO THE ETS FAMILY.

ESTABLISHING A SIGNALING COMPLEX FOR DOPAMINERGIC
NEUROTRANSMISSION THROUGH D2 RECEPTORS BY LINKING RECEPTORS
DOWNSTREAM SIGNALING MOLECULES AND THE ACTIN CYTOSKELETON.
SUBUNIT: POSSIBLY EXISTS AS AN HOMODIMER, HOMOTRIMER OR AN
HOMOTETRAMER. INTERACTS WITH F-ACTIN, PROTEIN PHOSPHATASE 1 (PP1)
NEURABIN-1, TGN38 AND D(2) DOPAMINE RECEPTOR.
                                                                                                                                                                                                                                                                Allen P.B., Ouimet C.C., Greengard P.; "Spinophilin, a novel protein phosphatase 1 binding protein localized
                                                                                                                                              Rattus norvegicus (Rat).

-1- DISEARS: DEPECTS IN TCOF1 ARE THE CAUSE OF TREACHER COLLINS
SYNDROME (TCS). TCS IS A AUTOSOMAL DOMINANT DISORDER OF
CRANIOPACIAL DEVELOPMENT THAT OCCURS WITH AN INCIDENCE OF 1/50,000
LIVE BIRTHS. THE CLINICAL FRATURES OF TCS ARE BILATERALLY
SYMMETRICAL AND INCLUDE: (1) ABNORMALITIES OF THE EXTERNAL EARS,
ATRESIA OF THE EXTERNAL EAR CANALS, AND MALPORMATION OF THE MIDDLE
EAR OSSICLES, WHICH MAY RESULT IN CONDUCTIVE HEARING LOSS; (2)
LATERAL DOWNWARD SLOPING OF PALPEBRAL FISSURES, FREQUENTLY WITH
COLOBOMAS OF THE LOWER EXELLIDS; (3) HYPOPLASIA OF THE MANDIBLE AND
ZYGOMATIC COMPLEX; (4) CLEFT PALATE.
